

FMH STAINLESS

Security planters – UK

2011-04/af

Reference: Security planters, outside the Danish embassy in London.

This is in **Colourtex charcoal pinstripe** finish -

FMH STAINLESS

Outside an HSBC premises on Canary Wharf

These are made in **Textured Linen** 304 Stainless Steel 1.5mm thick.

They have produced a number of these planters for the Olympics and these will be installed at key locations around the Olympic site

The planters are produced from rectangular sections built up to form the rough shape and then clad in a stainless steel shroud in our products. There is of course a lot of ballast in the centre including earth to give weight, and the planters are anchored deep into the ground to a distance of several (7 - 8) meters. They are designed to stop a 7.5 ton truck doing approximately 30 mph dead.
